

When irritation is a problem

Assessment

Approach your occupational health team for an assessment of your reaction*

Donning

Do not don gloves with wet hands

Avoiding detergents

Avoid detergents and opt for alcohol based hand rubs to reduce skin irritation

Emollients

Use moisturising skincare products that contain emollients

Correct gloves

Wear gloves that do not contain chemical accelerators that are known to cause contact dermatitis

Contact dermatitis

Is an inflammation of the skin resulting from direct contact of a substance such as solvents or other chemicals with the surface of the skin.

There are two types of contact dermatitis. **Irritant contact dermatitis** and **allergic contact dermatitis**. The symptoms can be itching, pain, rashes, bumps, burning skin and blisters¹.

The Biogel® PI UltraTouch® S glove is made with a skin-friendly formula, free from chemical accelerators known to cause contact dermatitis². It is a Puncture Indication System that is FDA cleared to reduce the potential of sensitising users to chemical additives.
