

Minimizing our environmental impact

Our Biogel® gloves are made with precision – and that includes our approach to sustainability. **Here are five examples** of the progress we are making towards achieving our vision.

2

Recyclability

The inner wrap, dispenser boxes, and shipping boxes of the Biogel surgical gloves are all recyclable.

Did you know:

Zero manufacturing waste goes to landfill.

3

Manufacturing

All Biogel gloves factories are ISO 14001 certified international standard for environment management system – ensuring continual improvement in environmental management through more efficient use of resources and waste reduction.

4

Printing

We have replaced the solvent-based ink with a water-based alternative for the printing on our packaging.

1

Sourcing

We only source natural rubber and synthetic latex from certified suppliers (ISO 14001) to produce the Biogel gloves.

5

CO₂ emissions

We are committed to reducing greenhouse gas emissions. Therefore, we use solar energy in the gloves packing factory (photo above), and there are similar plans for the manufacturing factories.

Together we can **make a difference!**
